8800 Roeselare  
=====

**BETREFT:**

Plaats van de proeven: Oostnieuwkerksesteenweg in Roeselare. Mirom  
Uitvoering sonderingen: 07/08/2018  
Referentie: JL18.081 – 117376 Mirom bouw nieuwe burelen  
opsteller verslag: SM

**AARD VAN DE PROEVEN:**

**AANTAL:**

Uitvoering van sonderingen van 20 ton  
De krachtopname gebeurt door middel van een elektronische conus

4

Plaatsen van peilbuizen tot 3 meter diepte  
Opmeten grondwaterstand

2

2

## **BESPREKING VAN DE RESULTATEN**

### **a) Grondwaterstand**

De aangegeven waarde heeft betrekking op de grondwaterstand, gemeten in het sondeergat, onmiddellijk na het verwijderen van de sondeerstanden. Deze meting wordt gegeven ten titel van inlichting en kan verschillen vertonen t.o.v. de werkelijke grondwaterstand.

Deze laatste kan enkel nauwkeurig bepaald worden met een waarnemingsbuis.

De aangegeven dieptes zijn t.o.v. het maaiveld ter plaatse van de proef.

Sondering 1: Sondeergat dichtgevallen op 0,40 meter diepte

Sondering 2: Grondwater op 2,90 meter diepte

Sondering 3: Sondeergat dichtgevallen op 0,10 meter diepte

Sondering 4: Grondwater op 1,85 meter diepte

### **b) Hoogteligging**

Het referentieniveau VP van de sonderingen stemt overeen met de vloerplas poort 10 (ingang personeel fabriek), aangeduid op het plan in bijlage.

Referentieniveau VP : + 10,00 meter

Niveau maaiveld sondering S1 : + 10,07 meter

Niveau maaiveld sondering S2 : + 9,96 meter

Niveau maaiveld sondering S3 : + 9,88 meter

Niveau maaiveld sondering S4 : + 10,02 meter

### **c) Peilbuizen**

Op het terrein werden twee peilbuizen tot 3 meter diepte geplaatst.

De peilbuizen bestaan uit één meter filtergedeelte (= onderste deel van de peilbuis) en twee meter blinde buis.

De peilbuizen werden afgesloten door middel van een straatpot.

| <b>Peilbuis</b>                                | <b>PB1</b> | <b>PB2</b> |
|------------------------------------------------|------------|------------|
| Maaiveldhoogte (MV) t.o.v. de referentie       | + 9,96m    | + 10,02m   |
| Grondwaterstand t.o.v. het maaiveld 09/08/2018 | 2,90m-MV   | 1,85m-MV   |

- De in dit beproevingsverslag staande resultaten hebben uitsluitend betrekking op de beproefde objecten of stalen, interpretatie van de resultaten dient door de klant te gebeuren.

d) Voorbereidende werken

Ter plaatse van alle proefpunten werd de bestaande toplaagverharding doorboord door middel van een kernboormachine. De onderliggende fundering werd verwijderd en de boorschacht werd met een handboor verder uitgediept tot 1,20 meter diepte.

Aansluitend werd deze aangevuld met goed verdicht zand en werd de proef aangevat.

De meetresultaten in de zone vanaf het maaiveld tot op 1,20 meter diepte zijn dan ook niet bruikbaar.

Een overzicht van de samenstelling van de bestaande toplaagverharding vindt U in onderstaande tabel.

| Proefpunt | boordiepte | samenstelling               |
|-----------|------------|-----------------------------|
| S1        | 62 cm      | 12 cm KWS + 50 cm steenslag |
| S2        | 66 cm      | 11 cm KWS + 55 cm steenslag |
| S3        | 62 cm      | 10 cm KWS + 52 cm steenslag |
| S4        | 60 cm      | 12 cm KWS + 48 cm steenslag |

e) Opmerking

In overleg met de verantwoordelijke bij Mirom werd er gesondeerd waar mogelijk. Dit wegens de aanwezigheid van nutsleidingen.
