

H1

This image shows a vertical cross-section of an archaeological excavation. At the top, a 1-meter scale bar is visible. The soil profile is divided into four horizontal layers, labeled H1, H2, H3, and H4 from top to bottom. A yellow measuring tape is placed vertically on the left side of the profile. A black label with white text is attached to the right side of the profile, providing site and sample information. The soil in the upper layers (H1 and H2) is darker and more textured, while the lower layers (H3 and H4) are lighter and smoother.
