This technical site plan illustrates the proposed layout for three padel courts (Padel 1, Padel 2, and Padel 3) and a future expansion zone. The plan includes detailed foundations, drainage systems, and various annotations for construction and future development.

Key Features and Annotations:

- Foundations and Structure:** Foundations for Padel 1, Padel 2, and Padel 3 are shown, including ring beams (Ringbalk beton padelterrein) and concrete walls (Keermuur beton). A future expansion zone (TOEKOMSTIGE UITBREIDINGSZONE PADEL) is also indicated, noting that foundations will already be in place.
- Drainage and Water Management:** The plan shows a network of drainage pipes (AFVOER REGENWATER PADEL) and a central buffer tank (ONDERGRONDS BUFFERBEKKEN) with a capacity of at least 290m³, to be realized with infiltration grates. A rainwater outlet (Regenwaterput 10.000 L) is also shown, with a note that recovery will occur in a later phase through a sports hall.
- Future Expansion and Existing Infrastructure:** The plan identifies future expansion zones for the sports hall (TOEKOMSTIGE UITBREIDINGSZONE SPORTHAL) and the padel courts. It also shows existing infrastructure, including a drainage system (bestaande riolering Ø400) and a pump station (Pompstation).
- Orientation and Scale:** The plan includes a north arrow and a scale of 1/100. Various dimensions and coordinates are provided for precise location and construction.
